

TORO

Count on it.

e-Train for SitePro[®]

Computer-based SitePro Training

NSN[®] TRAINING

e-Train for SitePro[®]

Toro NSN's e-Train CD-ROM is an introductory level training course designed to teach users who have not yet attended an instructor-led course. Although there is no substitute for attending an NSN class and the benefit you receive through the interaction with the instructor and other students, computer-based e-Train presents both an interactive way to improve the daily operational skills of those who can not yet attend, and to refresh the skills of those who have. And, e-Train can help with productivity, budget, and labor challenges too. Learning with e-Train will build your crew's confidence and skill level, effectively bridging the time between hire and attending their first SitePro instructor-led class. It's easy to fit into schedules because e-Train is self-paced, and the CD will track your progress each step of the way so you can start and stop as time allows. A certificate of completion may be printed upon successful completion of all tasks in the course. It's an easy first step in "Mastering SitePro."
